

LEONARDO

August Continuing Education

Future Advancements in Contact Lenses

NCLE/NY

Live August 28th 4pm EST
1 Hour

This course reviews emerging directions in contact lens technology with a focus on innovations that may affect future contact lens prescribing, fitting, patient education, and clinical monitoring.

Topics include advances in lens materials, medically necessary contact lenses, myopia management lenses, and smart contact lens technologies.

During this time, we will distinguish between technologies that are currently in use, those in development, and those that remain longer-term possibilities.

This course is approved for 1 hour of CE credit by the NCLE & New York state.

- To receive CE credit, you must be actively participating with the instructor during the live session.
- Watching the recording will provide great educational content, it will not result in receiving CE credit.
